1 Problem Statement

Let $\mathbf{W}_1$ and $\mathbf{W}_2$ be subspaces of a vector space $\mathbf{V}$ such that the set-theoretic union of $\mathbf{W}_1$ and $\mathbf{W}_2$ is also a subspace. Prove that one of the spaces $\mathbf{W}_i$ is contained in the other.

2 Solution

To prove that $\mathbf{W}_1 \subseteq \mathbf{W}_2$ or $\mathbf{W}_2 \subseteq \mathbf{W}_1$, we assume that $\mathbf{W}_1 \nsubseteq \mathbf{W}_2$. Consider a vector, $\mathbf{w}_1 \in \mathbf{W}_1$ that is not in $\mathbf{W}_2$ and a vector $\mathbf{w}_2 \in \mathbf{W}_2$. Then the vectors, $\mathbf{w}_1$ and $\mathbf{w}_2$ are in $\mathbf{W}_1 \cup \mathbf{W}_2$ and since this a subspace,

$$\mathbf{w}_1 + \mathbf{w}_2 \in \mathbf{W}_1 \cup \mathbf{W}_2 \tag{2.0.1}$$

$$\implies \mathbf{w}_1 + \mathbf{w}_2 \in \mathbf{W}_1 \quad or \tag{2.0.2}$$

$$\mathbf{w}_1 + \mathbf{w}_2 \in \mathbf{W}_2 \tag{2.0.3}$$

But, $\mathbf{w}_1 + \mathbf{w}_2 \notin \mathbf{W}_2$ because for some vector $-\mathbf{w}_2 \in \mathbf{W}_2$,

$$(\mathbf{w}_1 + \mathbf{w}_2) - \mathbf{w}_2 = \mathbf{w}_1 \notin \mathbf{W}_2 \tag{2.0.4}$$

Hence, $\mathbf{w}_1 + \mathbf{w}_2 \in \mathbf{W}_1$ because for some vector $-\mathbf{w}_1 \in \mathbf{W}_1$,

$$(\mathbf{w}_1 + \mathbf{w}_2) - \mathbf{w}_1 = w_2 \in \mathbf{W}_1 \tag{2.0.5}$$

Thus, we have shown that every vector $\mathbf{w}_2$ in $\mathbf{W}_2$ is also in $\mathbf{W}_1$. Hence, $\mathbf{W}_2 \subseteq \mathbf{W}_1$
